Novogodišnja jelka

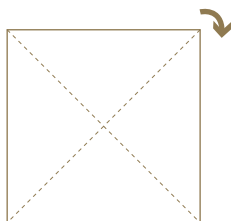

1

Za svako drvo isecite od papira ili kartona tri kvadrata stranica 15, 18 i 21 cm.

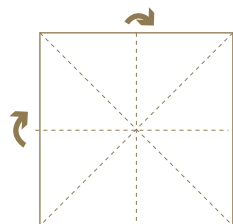

Savijte prvi kvadrat jednom po dijagonali, i zatim ga opet otvorite.

2

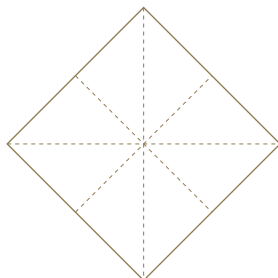

Opet ga presavite po dijagonali i otvorite.

3

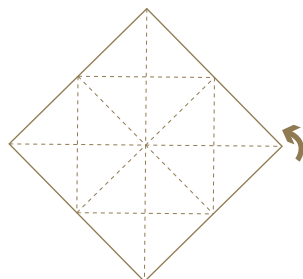

Presavite ga na pola i opet otvorite.

4

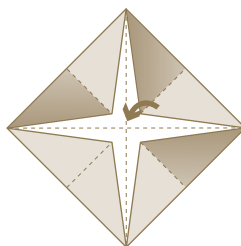

Opet ga presavite na pola i otvorite.

5

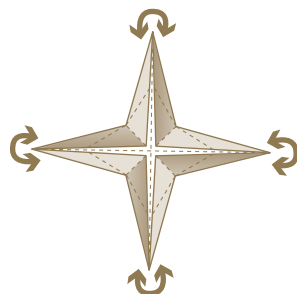

Presavite sva četiri čoška na pola.

6

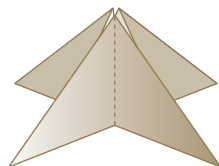

Postavite ispresavijani objekat sa vrhom na dole.

7

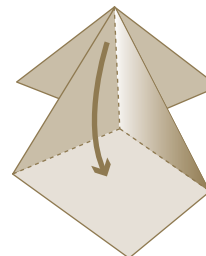

Savite dijagonalne stranice nagore. Da biste ovo uradili, uhvatite prvu dijagonalu za čoškove, uštinite ih zajedno (po potrebi ponovo presavite) i gurnite nagore. Uradite to i sa drugom dijagonalom.

8

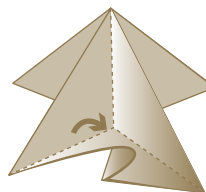

Rotirajte zvezdu tako da unutrašnje ivice budu u centru.

9

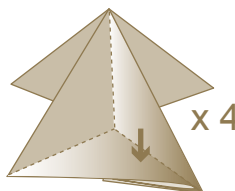

Otvorite prvi trougao savije nagore.

10

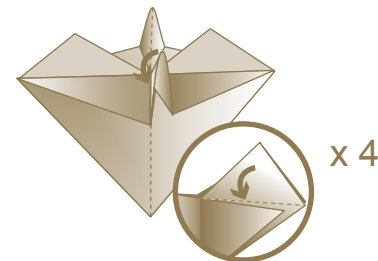

Savite otvoreni trougao nagore iz sredine i postavite centralni prevoj na desnu spoljašnju ivicu trougla kako biste dobili savijenu stranicu na dnu.

11

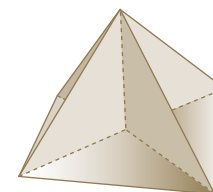

Pritisnite donji prevoj da bi polu-trougao stajao uspravno. Ponovite ovo sa ostale tri strane da biste dobili neku vrstu piramide.

12

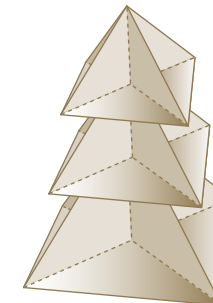

Okrenite piramidu (da vrh bude dole). Otvorite prvi prevoj nalevo, okrenite nadole, i gurnite u procep između stranica sa leve strane. Ovako ćete obezbediti strukturu. Ponovite sa ostala tri prevoja.

13

Postavite strukturu da stoji na osnovu.

14

Ponovite celu proceduru kako biste savili još dve strukture. Pažljivo ih postavite jednu drugoj na vrh da biste napravili drvo.
